Surface-mounting, 1-GHz-Band/3-GHz-Band, Miniature, DPDT, High-frequency Relay

- Superior high-frequency characteristics (at 1 GHz), such as an isolation of 20 dB min. between contacts of the same polarity of 30 dB min. between contacts of different polarity with an insertion loss of 0.2 dB max.
- Miniaturized to 10.3 × 6.9 × 5.4 mm (L × W × H).
- Rated power consumption of 100 mW with high sensitivity
- Single-side stable and single-winding latching models are available.
- Models with a smaller footprint (G6K(U)-2F-RF-S) are available to help save space.
- G6K(U)-2F-RF-T models for 3-GHz band join the lineup with a downsized footprint.
- New PCB terminals models are available.

Model Number Legend

G6K-□-□-□-□-□

1. Relay Function
   None: Single-side stable
   U: Single-winding latching

2. Number of poles/Contact Form
   2: 2-pole/ DPDT (2c)

3. Terminal Shape
   F: Outside-L surface mounting terminals
   P: PCB terminals

4. Special Function
   RF: High-frequency compatible

5. Terminal Shape
   S: Small footprint
   T: Compatible with 3 GHz

Application Examples
- Communications equipment
- Broadcasting and audio-visual equipment
- Test & measurement equipment

Note 1. When ordering, add the rated coil voltage to the model number.
   Example: G6K-2F-RF DC3 Rated coil voltage
   However, the notation of the coil voltage on the product case as well as on the packing will be marked as 300 VDC.

Note 2. When ordering Relays in tape packing, add “-TR03” to the end of the model number.
   Example: G6K-2F-RF-TR03 DC3 Relays per reel: 300 pcs for TR03
   Be sure since “-TR” is not part of the relay model number, it is not marked on the relay case.
   When ordering tape packing, minimum order unit is 1 reel (300 pcs × 1 = 300 pcs).

Note 3. Surface mounting terminal (SMT) standard models are shipped in moisture-proof package.
   PCB terminal standard types do not require moisture proof packaging and therefore shipped in non-moisture-proof package.

</tbody>
</table>

Note 1. The rated current and coil resistance are measured at a coil temperature of 23°C with a tolerance of ±10%.
Note 2. The operating characteristics are measured at a coil temperature of 23°C.
Note 3. The maximum voltage is the highest voltage that can be imposed on the Relay coil instantaneously.

Note. The above values are initial values.
*1. The contact resistance was measured with 10 mA at 1 VDC with a voltage drop method.
*2. Values in parentheses are actual values.
*3. The insulation resistance was measured with a 500 VDC megohmmeter applied to the same parts as those used for checking the dielectric strength.
**Engineering Data**

G6K(U)-2F(P)-RF(-S, -T) Surface-mounting High-frequency Relay

### Tube Packing and Tape Packing Specifications

Surface mounting terminal (SMT) standard models are shipped in moisture-proof package, and PCB terminal standard types do not require moisture proof packaging and therefore shipped in non-moisture-proof package.

Please refer to "Correct Use" for handling after opening moisture-proof packaging for Surface mounting terminal (SMT) models.

1. **Tube Packing**
   - G6K-2P-RF in tube packing are arranged so that the orientation mark of each Relay is on the left side. Fifty Relays are packed on one tube.
   - Be sure not to make mistakes in Relay orientation when mounting the Relay to the PCB.

   Tube length: 520 mm (stopper not included)

   No. of Relays per tube: 30 pcs

2. **Tape Packing (Surface Mounting Terminal Models)**
   - Add "TR03" to the end of the model number to order Relays in tape packing.
   - If "TR03" is not added, the Relays will be provided in tray packing.

   Relays per reel: 300 pcs
   - Minimum ordering unit: 1 reel (300 relays)

3. **Carrier Tape Dimensions**

   **G6K(U)-2F-RF**
   - 3° 0°
   - 1°

   **G6K(U)-2F-RF-S(-T)**
   - 3° max.

G6K(U)-2F-RF(-S, -T) Surface-mounting High-frequency Relay

G6K(U)-2F-RF(-S, -T) Recommended Soldering Method

- **Recommended Conditions for IRS Method (Surface-mounting Terminals)**

  1. **IRS Method (Mounting Solder: Lead)**

  - The thickness of cream solder to be applied should be between 200 and 250 μm and the land pattern should be based on OMRON's recommended PCB pattern.
  - To maintain the correct soldering joint shown in the following diagram, we recommend applying solder with the soldering conditions shown on the left.

  - **Correct Soldering**
    - Heat flux is formed
    - Insufficient amount of solder
    - Excessive amount of solder

  - **Incorrect Soldering**
    - Solder

  - Check the soldering in the actual mounting conditions before use.

  ![Soldering Diagram](image)

  - **Temperature (°C)**
    - Soldering: 250 max.
    - Preheating: 150
    - Relay terminal section: 120 max.
    - Case top panel (peak): 255°C max.

  - **Time (s)**
    - 30 max.
    - 90 max.

  - **Soldering Preheating Time**
    - 120 max.
    - 30 max.

  ![Temperature Profile](image)

  (The temperature profile indicates the temperature on the PCB.)

  (The temperature profile indicates the temperature on the circuit board surface.)
**Safety Precautions**

- For general precautions on PCB Relays, refer to the precautions provided in General Information of the Relay Product Data Book.

### Correct Use

- **Relay Handling**
  - Use the Relay as soon as possible after opening the moistureproof package. (As a guideline, use the Relay within one week at 30°C or less and 60% RH or less.) If the Relay is left for a long time after opening the moisture-proof package, the appearance may suffer and seal failure may occur after the solder mounting process. To store the Relay after opening the moisture-proof package, place it into the original package and seal the package with adhesive tape.
  - When washing the product after soldering the Relay to a PCB, use a water-based solvent or alcohol-based solvent and keep the solvent temperature to less than 40°C. Do not put the Relay in a cold cleaning bath immediately after soldering.

- **Environmental Conditions for Usage, Storage, and Transport**
  - Avoid direct sunlight when using, storing, or transporting the Relay and maintain normal temperature, humidity, and pressure conditions.

- **Long-term, Continuous ON Contacts**
  - Using the Relay in a circuit where the Relay will be ON continuously for long periods (rather than switching) can lead to unstable contacts because the heat generated by the coil itself will affect the insulation and can cause a film to develop on the contact surfaces. We recommend using a latching relay (magnetic-holding relay) in this kind of circuit. If a single-side stable model must be used in this kind of circuit, we recommend adding fail-safe circuits in case the contact fails or the coil burns out.

- **Claw Securing Force During Automatic Mounting**
  - During automatic insertion of Relays, be sure to set the securing force of each claw to the following so that the Relay’s characteristics will be maintained.

  ![Correct Use Diagram]

  - Secure the claws to the shaded area. Do not attach them to the center of the Relay or just one part of the Relay.

### Coating

- Do not use silicone coating to coat the Relay when it is mounted to the PCB. Do not wash the PCB after the Relay is mounted using detergent containing silicone. Otherwise, the detergent may remain on the surface of the Relay.

### Repeatability

- Contact your OMRON representative if the Relay will be used in an application that requires high repeatability in high-frequency characteristics for the microload region. (Such applications include testing and measurement equipment and ATE applications.)

### About use of an IC socket.

- **For: G6K-2P-RF**
  - When using IC sockets, select IC sockets by confirming that the sockets Rated/Spec./Characteristics are within the range of using condition. Also, confirm whether there is any problem of electric capability or plug insertion or not with actual using condition.

### Others

- **For: G6K-2P-RF**
  - The dotted line below on the surface of relay is connected with a metal case (ground). So confirm the actual influence of insulation and signal characteristics when designing.

![Bottom View Diagram]

- Consult your OMRON representative before using the product under conditions which are not described in the manual or applying the product to nuclear control systems, railroad systems, aviation systems, vehicles, combustion systems, medical equipment, amusement machines, safety equipment, and other systems or equipment that may have a serious influence on lives and property if used improperly. Make sure that the ratings and performance characteristics of the product provide a margin of safety for the system or equipment, and be sure to provide the system or equipment with double safety mechanisms.

**Note: Do not use this document to operate the Unit.**
