Surface-mounting, 3-GHz-Band, Miniature, SPDT, High-frequency Relay

- Superior high-frequency characteristics, such as an isolation of 30 dB min., insertion loss of 0.5 dB max., and V.SWR of 1.5 max. at 2.6 GHz.
- Surface-mounting terminals and superior high frequency characteristics combined using semi triplate strip transmission lines.
- Miniature dimensions of 20 × 8.6 × 8.9 mm (L × W × H).
- Choose from a lineup that includes single-winding latching models (200 mW), double-winding latching models (360 mW), and models with a reverse contact arrangement.
- Series includes models with an E-shape terminal structure (same as existing models), and models with a Y-shape terminal structure, allowing greater freedom with PCB design.
- Models with 75-Ω impedance and models with 50-Ω impedance are available.

Model Number Legend

<table>
<thead>
<tr>
<th>G6Z - □□□□□□</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>

1. **Relay Function**
- None: Single-side stable
- U: Single-winding latching
- K: Double-winding latching

2. **Contact Form**
- 1: SPDT (1c)

3. **Terminal Shape**
- F: Surface-mounting terminals
- P: PCB terminals

4. **Terminal arrangement**
- None: Y-shape terminal structure
- E: E-shape terminal structure

5. **Characteristic Impedance**
- None: 75 Ω
- A: 50 Ω

6. **Contact Arrangement**
- None: Standard contact arrangement
- R: Reverse contact arrangement

Application Examples

These Relays can be used for switching signals in media equipment.

- **Wire communications:** Cable TV (STB and broadcasting infrastructure), cable modems, and VRS (video response systems)
- **Wireless communications:** Transceivers, ham radios, car telephones, ETC, ITS, high-level TV, satellite broadcasting, text multiplex broadcasting, pay TV, mobile phone stations, TV broadcasting facilities, and community antenna systems
- **Public equipment:** TVs, TV games, satellite radio units, car navigation systems
- **Industrial equipment:** Measuring equipment, test equipment, and multiplex transmission devices

**Notes**

1. Please add the coil rated voltage (V) to the model number when ordering.
   Example: G6Z-1PE DC3

2. In addition, the delivered product and its package will be marked with voltage specification as "□□VDC".

3. This specification, however, is not part of the relay model number, so it is not marked on the relay case. (If "-TR" is not added to the end of the model number, the Relays will be provided in tube packing.)

4. Consult your OMRON representative for reverse contact models.

**Notes**

1. The rated current and coil resistance are measured at a coil temperature of 23°C with a tolerance of ±10%.

2. The operating characteristics are measured at a coil temperature of 23°C.

3. The maximum voltage is the highest voltage that can be imposed on the Relay coil instantaneously.

4. The voltage measurements for operate/release and set/reset are the values obtained for instantaneous changes in the voltage (rectangular wave).

#### Dielectric strength

- Between Coil and contacts: 1,000 VAC, 50/60 Hz for 1 min
- Between ground and coil/contacts: 500 VAC, 50/60 Hz for 1 min
- Between Contacts of the same polarity: 500 VAC, 50/60 Hz for 1 min

#### Vibration resistance

- Destruction: 10 to 55 to 10 Hz, 0.75 mm single amplitude (1.5 mm double amplitude)
- Malfunction: 10 to 55 to 10 Hz, 0.75 mm single amplitude (1.5 mm double amplitude)

#### Shock resistance

- Destruction: 1,000 m/s²
- Malfunction: 500 m/s²

#### Durability

- Mechanical: 1,000,000 operations min. (at 36,000 operations/hour)
- Electrical: 300,000 operations min. (30 VAC, 10 mA/30 VDC, 10 mA), 100,000 operations min. (900 MHz, 10 W) at a switching frequency of 1,800 operations/hour

#### Ambient operating temperature

- -40°C to 70°C (with no icing or condensation)

#### Ambient operating humidity

- 5% to 85% RH

#### Weight

- Approx. 2.8 g

**Note.** The above values are initial values.

*1. Contact your OMRON representative if the Relay will be used in applications that require high repeatability with high-frequency characteristics in microload regions.

*2. These values are for an impedance of 50 Ω or 75 Ω with a V.SWR of 1.2 max.
## Engineering Data

### Ambient Temperature vs. Maximum Voltage

---

*1. The tests were conducted at an ambient temperature of 23°C.

*2. The contact resistance data are periodically measured reference values and are not values from each monitoring operation. Contact resistance values will vary according to the switching frequency and operating environment, so be sure to check operation under the actual operating conditions before use.
The tests were conducted at an ambient temperature of 23°C.

High-frequency characteristics depend on the PCB to which the Relay is mounted. Always check these characteristics, including endurance, in the actual machine before use.

1. Direction of Relay Insertion

2. Reel Dimensions

3. Carrier Tape Dimensions

- Tube Packing and Tape Packing

1) Tube Packing
- Relays in tube packing are arranged so that the orientation mark of each Relay is on the left side.
- Be sure not to make mistakes in Relay orientation when mounting the Relay to the PCB.
- Tube length: 530 mm (stopper not included)
- No. of Relays per tube: 25 pcs

2) Tape Packing (Surface-mounting Terminal Models)
- When ordering Relays in tape packing, add the prefix "-TR" to the model number, otherwise the Relays in tube packing will be provided.
- Relays per Reel: 300 pcs
- Minimum packing unit: 1 Reel (300 pcs)

■ Recommended Soldering Method

- Temperature Conditions for IRS Method
  - When using reflow soldering, ensure that the Relay terminals and the top of the case stay below the following curve. Check that these conditions are actually satisfied before soldering the terminals.

- The thickness of cream solder to be applied should be between 150 and 200 μm on OMRON’s recommended PCB pattern.

Correct Soldering
Incorrect Soldering

Check the soldering in the actual mounting conditions before use.

<table>

<td>--</td>
<td>--</td>
<td>255°C max.</td>
</tr>
</tbody>
</table>

- Do not quench the terminals after mounting. Clean the Relay using alcohol or water no hotter than 40°C max.
Precautions

For general precautions on PCB Relays, refer to the precautions provided in General Information of the Relay Product Data Book.

Correct Use

High-frequency Characteristics Measurement Method and Measurement Substrate
- High-frequency characteristics for the G6Z are measured in the way shown below. Consult your OMRON representative for details on 50-Ω models.

Measurement Method for 75-Ω Models

Substrate Types
- Material: FR-4 glass epoxy (glass cloth impregnated with epoxy resin and copper laminated to its outer surface)
- Thickness: 1.6 mm
- Thickness of copper plating: 18 μm

Note 1. The compensation substrate is used when measuring the Relay’s insertion loss. The insertion loss is obtained by subtracting the measured value for the compensation substrate from the measured value with the Relay mounted to the high-frequency measurement substrate.

Note 2. For convenience, the diagrams of the high-frequency measurement substrates given here apply both to models with an E-shape terminal structure and to models with a Y-shape terminal structure.

Note 3. Be sure to mount a standoff tightly to the through-hole substrate.

Note 4. Use measuring devices, connectors, and substrates that are appropriate for 50Ω and 75Ω respectively.

Note 5. Ensure that there is no pattern under the Relay. Otherwise, the impedance may be adversely affected and the Relay may not be able to attain its full characteristics.

Handling
- Do not use the Relay if it has been dropped. Dropping the Relay may adversely affect its functionality.
- Protect the Relay from direct sunlight and keep the Relay under normal temperature, humidity, and pressure.
- Use the Relay as soon as possible after opening the moisture-proof package. If the Relay is left for a long time after opening the moisture-proof package, the appearance may suffer and seal failure may occur after the solder mounting process. To store the Relay after opening the moisture-proof package, place it into the original package and sealed the package with adhesive tape.
- When washing the product after soldering the Relay to a PCB, use a water-based solvent or alcohol-based solvent, and keep the solvent temperature to less than 40°C. Do not put the relay in a cold cleaning bath immediately after soldering.

Claw Securing Force During Automatic Mounting
- During automatic insertion of Relays, be sure to set the securing force of each claw to the following so that the Relay’s characteristics will be maintained.

Substrate for High-frequency Characteristic Compensation (75-Ω Models, E-shape or Y-shape)

Secure the claws to the shaded area. Do not attach them to the center area or to only part of the Relay.

Latching Relay Mounting
- Make sure that the vibration or shock that is generated from other devices, such as Relays, on the same panel or substrate and imposed on the Latching Relay does not exceed the rated value, otherwise the set/reset status of the Latching Relay may be changed. The Latching Relay is reset before shipping. If excessive vibration or shock is imposed, however, the Latching Relay may be set accidentally. Be sure to apply a reset signal before use.

Coating
- Do not use silicone coating to coat the Relay when it is mounted to the PCB. Do not wash the PCB after the Relay is mounted using detergent containing silicone. Otherwise, the detergent may remain on the surface of the Relay.

Repeatability
- Contact your OMRON representative if the Relay will be used in an application that requires high repeatability in high-frequency characteristics for the microload region. (Such applications include testing and measurement equipment and ATE applications.)
Application examples provided in this document are for reference only. In actual applications, confirm equipment functions and safety before using the product.

Consult your OMRON representative before using the product under conditions which are not described in the manual or applying the product to nuclear control systems, railroad systems, aviation systems, vehicles, combustion systems, medical equipment, amusement machines, safety equipment, and other systems or equipment that may have a serious influence on lives and property if used improperly. Make sure that the ratings and performance characteristics of the product provide a margin of safety for the system or equipment, and be sure to provide the system or equipment with double safety mechanisms.

Note: Do not use this document to operate the Unit.
